4 Research Impact

In this thesis, we will:

- i. Develop top-down and bottom-up methods for quantifying the value of context-driven information to reduce mission execution uncertainty
- ii. Determine the mission relevant information via sensitivity analyses for robust COA recommendations
- iii. Develop algorithms that increase the efficiency of asset utilization at tactical and operational levels
- iv. Develop algorithms that facilitate faster planning (especially in the readjustment of plans to meet contingencies)
- v. Enable faster response in dynamically changing mission environments
- vi. Develop algorithms that provide intelligent courses of action to the appropriate commanders in a timely manner
- vii. Develop algorithms that will dynamically coordinate assets to facilitate agile counter-action strategies
- viii. Develop methods to facilitate and enhance proactive decision support systems
